We will examine the complex, changing, and ever-present representations of heroes and villains in American film. Beginning with a foundational understanding of how heroes and, conversely, villains have been defined through classic Hollywood film, we will explore how these definitions have shifted throughout the 20th and 21st century in various narrative genres, including westerns, war films, film noir, fantasy, science fiction, and, of course, superhero movies. In particular, we will be focusing on how the hero and villain maintain or disrupt specific cultural ideologies concerning race/ethnicity, gender, sexuality, and ability. This course will examine how these various ideologies have evolved throughout the 20th and 21st century, impacting the ways in which heroes and villains are both represented in American film and perceived by diverse audiences. Finally, we will examine our own complicated and sometimes troubling identification with these heroes, even when they might stand in stark contrast to our cultural values and identities.

AMST629U **Seminar in American Studies; Introduction to Digital Studies in the Arts and Humanities**

Credits: 3 Grading Method: Regular, Audit

Cross-listed with MITH610. Credit granted for AMST629U or MITH610. Digital Studies is an interdisciplinary approach to scholarship and teaching that combines the critical study of new forms of digital media,culture, and identity with creative practices and the application of computational tools to areas of humanistic study. While it is often hands-on or applied, Digital Studies also demands approaches that are primarily critical, theoretical, speculative, or experimental- imaginative-in nature. Broadly speaking then, Digital Studies is a response to the widespread influence of digital media across nearly every aspect of contemporary life; more specifically, it recognizes that teaching, research, and scholarship in the arts and humanities cannot and will not remain isolated from the networks, platforms, and media providers all around us. This course is designed to introduce you to several different (and divergent) topics and practices in this diverse, complex, and rapidly changing area.

Beginning in the middle to late 20th century, human organization and experience has increasingly been influenced by digital forms of communication and production. Do these changes make us new types of people and societies? By putting the digital world in the context of the major periods associated with organic and mechanical technology, this course examines who contemporary people are and whether or not they are unique. The answer to this question will focus on how technological changes the individual, social organization and the relationship with the natural world. Sources from historians, anthropologists, sociologists, philosophers, political scientists and ecologists will be used to reconstruct these worlds.

Selected Topics in Architectural History

This course examines the historical process by which Architecture and Engineering came to be the two separate professions they are today. It is a history which gives an understanding of the position of architects today. It will give each individual a chance to contemplate the effect of a professional education. We begin with examples of ancient architectural monuments, questioning what roles the makers could have played. Next we look at written works about building. The growth of professional education from the 17th to the 19th in western Architecture and Engineering is the major concentration of the course. The education of the professional in this last period produced the profound separation between architect and engineer in the modern period. As a member of this class, you will examine how this history may affect your own professional choices.

Grading Method: Regular, Pass-Fail, Audit

Selected Topics in Architecture

During this discussion seminar, we will use intersectional feminist theory and critique to unpack how cultural norms around gender and sex are built into architecture via government regulation including laws and code, conventional wisdom, and unconscious bias. Through the examination of cultural artifacts such as literature, art, and film, we will uncover social notions of gender and sex, and trace parallels of how changing notions of sex, sexuality, and gender has been represented or not in the architecture. Analysis of a wide range of architectural typologies and styles will aid in the investigation of how the built environment reflects and shapes our ideas about gender and sex. Scholarship will be undertaken to elaborate on the central questions of: What would gender equitable architecture be like? What would sex-positive architecture be like?

How do monuments embody cultural values, consolidate power structures, and become sites for mourning and protest? We will examine war memorials, civic statuary, counter-monuments, and abstract public works, including Maya Lin's Vietnam Veterans Memorial (1982) and the recently opened Equal Justice Initiative's Memorial to Peace and Justice in Alabama. We will also explore the work of contemporary artists such as Tatsu Nishi, Titus Kaphar, Krzysztof Wodiczko, and Kara Walker, whose ephemeral installations, photographic projections, and new sculptural bodies challenge and reinvent conventions of monumentality.

ARTH749D **Seminar in Nineteenth-Century European Art; The "Western Tradition" in the Museum: Power Play**

Credits: 3 Grading Method: Regular, Audit, Sat-Fail

Many major American art museums were established originally as repositories of art deemed valuable by civic and national elites of the time. Generally of European descent, these social and financial leaders were particularly drawn to Western paintings, sculptures, works on paper and decorative arts, establishing a canon with the help of critics and art historians. This course takes a critical look at the National Gallery of Art's collections in this area to trace the values embodied by particular works and groups of works, and the ways in which those values have been reaffirmed, redefined, deconstructed and/or negated in the decades since the museum s opening in 1941.

Since the end of the 1980s, contemporary art produced by artists of Chinese cultural identity has exhibited internationally in accordance with western(ized) curatorial discourses and practices associated with the White Cube and its postmodernist variants. This graduate seminar and the symposium will intervene critically with those discourses and practices by exploring the possibility of alternative approaches to the curation of culturally Chinese contemporary art.

ARTH789C **Selected Topics in Art History; Renaissance Darkness**

Credits: 1-3 Grading Method: Regular, Audit, Sat-Fail

This seminar addresses the visual phenomenon of darkness: how it was experienced, conceptualized, and represented in cultural products of the early modern period. We will look at literary, philosophical, and scientific texts to unpack ideas about darkness, night, and shadows. We will consider how visual media physically registered night and shadow - the importance of medium (tempera, oil), the use and locus of the color black, the dark line of prints - and what subjects were depicted in darkened settings. Other issues may include: the growth of artificial illumination; the Biblical meanings of darkness; darkness, fear, crime, and punishment; sleep; blindness; dark clothing; and the development of ideas about dark skin in a "pre-racial" era.

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | CORE: PS | General Education: DSNS, SCIS

Prerequisite: Must have math eligibility of MATH115 or higher; or MATH113.

Have you ever wondered if humans will ever terraform Mars or Europa so we could live there without a spacesuit? Has it ever crossed your mind how lucky you are that you live on a water-rich planet with an oxygen-rich atmosphere? Have you ever suspected novelists and scriptwriters of creating ridiculous planets that violate scientific laws? Does the fate of our planet's thin biosphere keep you up at night? How common is life in the Universe? These are difficult questions, but armed with the right information, you can answer all of them. The Science and Fiction of Planetary Systems will help you develop a deeper understanding of why planets are the way they are. Along the way, you'll see examples of mistakes made in classic science fiction movies, novels and short stories and get the chance to invent your own plausible planets!

Black holes are the most exotic prediction of Einstein's Theory of General Relativity and, amazingly, the Universe seems to manufacture these bizarre objects in copious numbers. As well as being the ultimate laboratory for studying the nature of space and time, they drive some of the most energetic and extreme phenomena known to astronomers (with quasars and gamma-ray bursts being just a couple of examples). In this introduction to the physics and astrophysics of black holes, we start by examining the basic physics of black holes, which fundamentally means understanding gravity. We then look at the nature of stellar-mass black holes and supermassive black holes. We will discuss the fairly recent realization that black holes may be crucial agents for regulating the growth of galaxies. Finally, we dive into the realm of theoretical physics and probe how black holes may provide a route for uncovering new laws of physics governing the structure of space and time.

Difficult decisions require spending scarce resources. A 'resource' is any asset used to leverage business objectives, such as time and money. Tradeoffs are involved in allocating resources to one objective as opposed to another. This course develops a quantitative framework for studying resource allocation problems that arise in many industries and areas such as transportation, advertising, finance, and healthcare. The focus will be on translating verbal descriptions into quantitative optimization models, whereby standard tools (such as Microsoft Excel) can be applied to obtain solutions. The course also covers the role of uncertainty and risk in the decision-making process by using Monte-Carlo simulation models.

In the business press, on TV, and in board rooms, 'machine learning,' 'AI,' 'big data' and 'data analytics' are now hot topics. Vast quantities of data are being generated these days, including new types of data such as web traffic, social network data, and reviews and comments on websites. This data is a valuable resource that, when used correctly, can create a competitive edge for companies. Advances in computing hardware and algorithms have significantly improved the quality of predictions and effectiveness of business applications based on them. Expertise in working with data, and a sound knowledge of data mining/machine learning methods, is a much sought after skill. The course provides an introduction to the key tools and techniques of data mining/machine learning, including classification, prediction, cluster analysis, association rules, and text mining. The methods covered are Linear Regression, Logistic Regression, K-nearest neighbors, Naive Bayes, Classification and Regression Trees, Ensemble methods, Neural Networks, K-Means and Hierarchical Clustering, and Association Rules. The focus throughout will be on business applications. Examples from Marketing, Finance, Healthcare, and Operations will be used to illustrate the breadth of applications.

BUSO702 **Action Learning Project I**

Credits: 1 Grading Method: Regular

Restriction: Must be in Business and Management (Master's) program; or permission of BMGT-Robert H. Smith School of Business.

The objective of the Action Learning Project I and II is for teams to identify and solve business problems that currently exist in organizations and in the process, to provide significant value to organizations and their stakeholders. The experience of solving business problems will both enable students to apply knowledge learned in core courses and to develop the wisdom, skills, and problem-solving capabilities of team members. This course is designed to promote independent learning. Faculty members will offer mini-modules on key themes such as team dynamics, client relations and consulting protocols but their primary role will be to facilitate the ALP process and serve as consultants to the student teams.Selecting the right project and defining it unambiguously sets the stage for the rest of the ALP process improvement or problem solving effort, ultimately leading to a relevant, value added and well-received deliverable. Poor problem selection creates longer-term problems for both ALP teams and the sponsoring organization and can reduce or impede the quality of your learning experience. For this reason, we will lay the foundation for the final selection of projects during this term (a) soliciting ideas from all students, and (b) offering feedback to identify and nurture the most promising ideas.

This course will examine business ethics issues across a variety of business contexts. You will learn toapply a number of ethical theories to business problems, primarily through case studies and discussion.The goal is for you to engage actively with the material and understand the complexity of many ethical dilemmas that businesses and business owners face. Often in ethics there is not one right answer; rather,businesses and individuals must wrestle with ethical principles that may compete and conflict with one another in arriving at a resolution. We will explore conflicts between personal values and organizationalgoals, ethics as part of a business strategy, and various ethical frameworks businesses may use in understanding and implementing ethical approaches to problems.

Recommended: Any CHIN course or course on China. Credit only granted for: CHIN425 or CHIN429G. Formerly: CHIN429G.

This course looks into ethnic and cultural diversity in China. It examines the evolution of the People's Republic of China's (PRC) ethnic policies in relation to nation-state building over the last six decades. Specifically, it studies how the PRC has categorized the Chinese people into 56 ethnic groups, how it has made affirmative action policies to accommodate ethnic diversity, and what problems its approaches have experienced and what solutions it has proposed in its accommodation of ethnicity and diversity in the 21st century. To examine the above issues, the course introduces and applies the concepts of ethnicity, nationality, ethnic nationalism, civic nationalism, identity, social Darwinism, the Soviet model of multinational state building, the Chinese model of inclusive Chinese nation state building, citizenship, individual rights, group rights, equality, and diversity.

America, from its very origins as an independent nation, saw itself as the new Rome: its system of government is built on Roman precedents, its national buildings look as if they came from the Roman Forum, and its leisure activities take us to stadiums modeled on the Colosseum. America's relationship to Rome, however, raises its greatest anxiety: will America fall as Rome did? In 1776, the year of American independence, Edward Gibbon published his History of the Decline and Fall of the Roman Empire; America has been thinking about the trajectory of its history alongside Rome's from the very beginning.

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHU, DVUP

Cross-listed with: HIST339J. Credit only granted for: CLAS340 or HIST339J.

Interrogates how slavery permeated the ancient Mediterranean societies of Greece and Rome. We will pay particular attention to how hierarchical inequalities are institutionalized, experienced, and represented and to how different marginalized and dominant groups interacted. Enslaved persons performed necessary labor in Greece and Rome and their work was essential for the formation of ancient society in agriculture, mining, domestic spaces, literature, finance, and government. Studying ancient slavery offers a chance to examine Greece and Rome from the bottom up, parsing the scant literary and material evidence for the lives and struggles of enslaved persons. We will practice several different approaches in order to tease out the systematic, economic, political, and personal effects of slavery in the ancient world. The United States of America was also founded as a slave society, and discussions of slavery in the Americas often look back to the ancient Mediterranean. The course will therefore conclude with a unit on how enslavers and abolitionists in the United States utilized and responded to slavery in antiquity.

ECON175 **Inequality: Determinants and Policy Remedies**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS, SCIS

History shows that the gap between the rich and the poor has varied over time within and between countries, most recently seeming to increase within many countries while somewhat decreasing between countries. This course challenges students to investigate why people make different amounts of money, why income inequality has changed dramatically in recent years, what public policy tools exist to counter inequality increases, and what different institutional arrangements different countries use to lower inequality. This course will introduce students to theoretical tools used by economists to understand the sources of inequality and will also examine various empirical measures of inequality.

ECON185 **Energy: Crisis or Breakthrough?**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS, SCIS

Will we face an energy crisis in the near future, or will technological breakthroughs solve problems? Will we destroy the environment by careless use of polluting energy, or we will find new and clean sources of energy that resolves the environmental issue once and for all? Will politicians and governments succeed in agreeing on a coherent strategy to deal with global issues related to energy, or do we expect individual countries to move in different directions and exacerbate the problems? Students will explore the demand and supply sides of the energy market and their relationships with government policies and environmental concerns. Students will also analyze empirical evidence to better understand the factors affecting energy production and consumption in the past and possible directions in the future. By examining past situations when technological change mitigated problems in energy markets, we can make informed predictions about what could happen next.

ENEE200 **Technology and Consequences: Engineering, Ethics, and Humanity**

Credits: 3	Grading Method: Regular, Pass-Fail	CORE: IE	General Education: DSHU, SCIS

What makes a technology socially responsible? At UMD, the Fearless Ideas campaign asks us to aim our enthusiasm for technology at big real problems. At the same time, we are coming to appreciate the increasingly complex nature of technological systems as they become integrated into all forms of infrastructure, we realize they may be unpredictable, interdependent on social and biological systems, and have unintended consequences. In this midst of this complexity, people make decisions with far reaching impacts. How then do we follow our passion for technology and innovation but also stay skeptical in a way that allows us to consider the potential and shortcomings of technology? Designed for both engineering and non-engineering students wishing to explore and assess the impact of engineering technology on society and the role of society in generating that technology.

Emerging morphological properties of building clustersmodulate transient convective and radiative heat transfer resulting in different localmicroclimatic conditions. At the neighborhood scale, these conditions are analyzed using heatand mass transfer simulations in building clusters to provide boundary conditions for transient building energy simulations. At the individual building scale, besides the energy consumption,this course examines connection between indoor and outdoor environments.

As software gets more complex, there is even more potential for vulnerabilities to remain in the production version. While traditional and emerging software testing methods are very good at detecting a large majority of "bugs" in the software, modifications to the methods are necessary to ensure vulnerabilities related to security are discovered and mitigated prior to release. In industry, there is also a cost-benefit analysis that determines the limits to pre-release testing, further enforcing the need to uniquely identify security vulnerabilities, potentially prioritizing their correction over other vulnerabilities. This course will cover methods of building security in from the beginning of development and testing the resulting software to ensure security vulnerabilities are detected. The course will use a mixture of textbook principles and research papers to cover the concepts. Students will also complete a course project.

Cross-listed with: AMST213. Credit only granted for: AMST213, HONR219F or FILM298V. Formerly: HONR219F.

We will examine the complex, changing, and ever-present representations of heroes and villains in American film. Beginning with a foundational understanding of how heroes and, conversely, villains have been defined through classic Hollywood film, we will explore how these definitions have shifted throughout the 20th and 21st century in various narrative genres, including westerns, war films, film noir, fantasy, science fiction, and, of course, superhero movies. In particular, we will be focusing on how the hero and villain maintain or disrupt specific cultural ideologies concerning race/ethnicity, gender, sexuality, and ability. This course will examine how these various ideologies have evolved throughout the 20th and 21st century, impacting the ways in which heroes and villains are both represented in American film and perceived by diverse audiences. Finally, we will examine our own complicated and sometimes troubling identification with these heroes, even when they might stand in stark contrast to our cultural values and identities.

GVPT204 **Uncertain Partners: US and China in a Changing World**

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHS, SCIS

Credit only granted for: GVPT204 or GVPT289J. Formerly: GVPT289J.

The rapid ascent of the People's Republic of China (PRC) as a major political and economic power has meant that its relationship with the United States has become central in contemporary international politics. To an increasing extent, some of the biggest global challenges--ranging from nuclear proliferation, to climate change, to economic growth--require U.S.-China cooperation if they are to be managed effectively. Yet the U.S.-China relationship is at times turbulent, and its future remains highly uncertain. Will the U.S. and China be able to forge a closer partnership that will enable them to cooperate in dealing with some of the vexing challenges facing the international community? Or are they more likely to drift toward a more adversarial relationship, as China's growing power--and the US reaction--generate a vicious cycle of mutual mistrust? In this class, students will grapple with these questions as they learn about the history of U.S.-China relations, and about many of the current issues facing the relationship.

How does the human mind use language? Type "Language Science News" into your Google search bar. Among the more than 3 billion hits, headlines like "What is love? It depends what language you speak" and "Science's English dominance hinders diversity" invite you to think about the impact of words on thought and behavior. These are stories about how humans acquire and use language, but they ultimately address big questions about how we experience knowledge itself. In a world of unprecedented access to science journalism, did you ever read a headline about human behavior and wonder: How do we know? This class takes up the elegant ways cognitive scientists design experiments to answer crucial questions about language and thought, brain and behavior, that have no intuitive answers. Students will dive deep into the media coverage of their favorite claims about what we know, debate the psychological science behind these claims, and develop transferable critical-thinking skills in the process.

HESP468H **Professional Development in Research and Academia; Honors Seminar: Professional Development**

Credits: 1-3 Grading Method: Regular, Pass-Fail, Audit

The purpose of this seminar is to complement your honors project with practical advice on how to navigate successful careers in research and academia. As you progress through your undergraduate years (especially if you work in a lab), you will likely make several unofficial observations about life as a graduate student, postdoc, or professor, and overhear conversations that include new terminology that may be confusing (e.g., research mentorship, grants, conference abstract, tenure). This can create a mysterious aura around what it is like to obtain your PhD and work in academia generally. In this class, we will cover tips and skills that are often passed along informally in the lab; but here, we will discuss these issues overtly from a range of perspectives, experiences, and best practices.

HNUH University Honors Spring 2021

HNUH218A **Pursuits of Happiness: Ordinary Lives in the American Revolution**

Credits: 3 Grading Method: Regular, Pass-Fail General Education: DSHS, SCIS

Credit only granted for: HNUH218A or HIST137.

Dedicated to telling the stories of ordinary people in the American Revolution, to recovering the voices and experiences of all the founders of this country whose lives and contributions have been obscured by our tendency to worship a dozen or so well-to-do and well-educated men in suits as if they alone conceived and executed the American Revolution and the founding of the United States. So we'll be talking this semester about the marginalized, the downtrodden, the rank and file, the rabble - all the people who never make it onto monuments or money. The point of this is to allow us all to recognize the fundamental fact that fighting a Revolution is a collective act that requires a genuine mass movement. Declaring independence on a piece of parchment on a summer's day in Philadelphia in 1776 doesn't mean anything unless tens of thousands of people are willing to support that cause and fight to make it a reality. To revolt, then, is not an individual act - it's for crowds, for mobs, and for whole communities to do together. Declaring independence is a fundamentally cooperative act.

Restricted to UH students matriculating in Fall 2020 or later. This course is part of the "Revolution" cluster. Revolution courses will be offered through Spring 2022.

HNUH218X **Uprising, Riot, Revolt: Violence in Story and Theory**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHU, DVUP

How does violence connect to revolution? Is violence the result of lone wolf actors, oppressive social structures, or just blind fate? Is it a side-effect of revolution or its driving force? Is violence a way to fight injustice, or is it a problem of evil? Why is one person's uprising another person's riot? In this seminar, we will explore literature, politics, and religion to debate the meaning and causes of violence. By examining the writings of a prison psychiatrist, historians, activists, theorists, and theologians alongside classic and contemporary literary works, we will disrupt common understandings of violence. In conducting interviews with community members, engaging in classroom debate, and sharing ideas in a project-poster session, we will investigate violence in the UMD community and wider DC area, and propose ways toward revolutionary change.

Restricted to UH students matriculating in Fall 2020 or later. This course is part of the "Revolution" cluster. Revolution courses will be offered through Spring 2022.

HNUH218Y **The Science, Economics, and Governance of Climate Change: The Need For An Energy Revolution**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSNS, SCIS

Hardly a day goes by without some news worthy item being reported on Earth's changing climate. Often the stories are contradictory, tainted by parochialism and extremism, not only by the conservative and liberal media, but also by the camps of so-called believers and deniers. This seminar will begin with a review of the history of how decisions regarding human interactions with the environment have either doomed past societies to failure, or enabled long-term, sustainable success. Next we'll examine the science that underlies global warming, in a manner accessible to non-scientists, as well as the potential consequences of a rapidly changing climate. We will then discuss the economics of large-scale provision of energy by renewable resources, which will be needed to avert climate catastrophe. During the final few weeks of this seminar, students will break into three groups, representing various parts of the world, and negotiate an international plan to transition the world energy supply to renewable resources that emit little or no greenhouse gases.

Restricted to UH students matriculating in Fall 2020 or later. This course is part of the "Revolution" cluster. Revolution courses will be offered through Spring 2022.

HNUH219P **Transform Maryland: Theories into Practice**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSSP

In this intensive, 10-person seminar, students undertake a real-world consulting engagement for their client, the University of Maryland, to improve one of its operational processes. Working as a consulting team, students apply analysis, user-centered design, behavioral and social science methods in order to identify opportunities for innovation and recommend solutions. The one-semester engagement is broken into four phases--Frame, Explore, Analyze, and Recommend--through which students assess the potential for changing operations, addressing political differences, and the potential for technology to augment the streamlined process. The practicum focuses on transforming critical university administrative and business functions and culminates in a presentation to key members of the University of Maryland leadership team. The specific project changes from semester to semester.

Restricted to UH students matriculating in Fall 2020 or later. This course is the second half of the 'Transform MD' Theory/Practice track. HNUH 219T should be taken first.

HNUH228A **Peace in our time? Conflict and Conflict Resolution in International Politics**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS, SCIS

Is the world getting more peaceful? There are currently civil wars raging in much of the world and millions of people have fled these wars as refugees or internally displaced persons. Terrorist attacks kill thousands, and can occur in any corner of the planet. At the same time many actors use strategies such as peacekeeping, mediation, promotion of human rights and post-conflict justice to resolve conflicts and build peace. In this course, we will examine conflict, peace, and conflict resolution in contemporary international politics. We will interrogate concepts such as peace, conflict, and violence, the different forms that these phenomena can take, and how we can measure their occurrence. We will discuss theoretical explanations for why individuals and groups have disputes and why these actors choose to use violence (or not) in these disputes and examine these arguments in specific cases. We will analyze conflict resolution strategies such as mediation, peacekeeping, and human rights promotion both theoretically and empirically. This discussion will allow students to develop an argument for whether the world is getting more peaceful, why it is or is not, and what this could mean about the future of violence and peace.

Restricted to UH students matriculating in Fall 2020 or later. This course is part of the "War & Peace" cluster. War & Peace courses be offered through Spring 2022.

HNUH228Y **Interrogating Issues of Piracy/Pirates amidst the Shadowy Landscapes of War & Peace**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS, DVUP

Who are pirates and what constitutes piracy in a given era? To what extent do changing notions of piracy reflect major societal transformations at the national, regional and global levels, as well as reveal the contested and often overlapping boundaries of war and peace? How can we use pirates/piracy as a "tool" to engender an historical, economic, political, social, and cultural understanding of global forces and change? Do the legends and myths surrounding infamous pirates represent the realities and relationships of early and new forms of piracy? Could piracy be conceived as a form of counterculture? To what extent do piracy, rivalry, state building, war-making, peace-making all belong on the same continuum? This course examines pirates/piracy as an integral part of major global processes. We will investigate when and why piracy emerged and flourished, and how lawbreakers and lawmakers relate to one another on the murky terrains of power, then explore alternative ways to (re)configure who is a pirate and what constitutes piracy, especially within the dynamics of today's neo-liberal globalization.

HNUH228Z **The Problem of Prejudice: Overcoming Impediments to Global Peace and Justice**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHU

What is prejudice? How are our prejudices formed? What similarities and differences are there between various forms of prejudice across race, gender, nationality, politics, religion, among others? What is the relationship between prejudice and conflict? What is the role of prejudice in thinking about issues of peace and justice? How can we better understand the role that prejudice and discrimination have in a globalizing world? What can we learn from a scientific basis of knowledge about the causes of prejudice? This course will survey interdisciplinary scholarly research and popular cultural conversations about the root causes of prejudice and discrimination. You are expected to examine empirical evidence toward formulating your own views about the impact that all forms of prejudice impose on the human condition and the role it has played in your own life. Based on research evidence, the course encourages the search for solutions to the blight of prejudice.

HNUH229P **Climate in Crisis: Strategy and Advocacy**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSSP

This theory and practice track examines theoretical frameworks for understanding climate change and concrete cases that shed light on the complexity of managing it. In this, the practical component of the Climate in Crisis track, we explore several domestic energy and climate policy case studies, examining the competing roles played by various interest groups that influence legislative and regulatory outcomes, with a focus on differing organizational advocacy strategies. Once we have mastered organizational advocacy strategies, students bring those tools to bear on the most recent US Federal policy mandates and legislation. In 229T, students will complement this work with a deep dive into the nature of public goods and climate change policy, among other crucial considerations.

Credits: 3 | Grading Method: Regular, Pass-Fail

This theory and practice track examines theoretical frameworks for understanding climate change and concrete cases that shed light on the complexity of managing it. In this, the theoretical component of the Climate in Crisis track, we investigate the nature of global public goods and questions about how best to provide them in a situation of multiple actors (states, NGOs, local and indigenous communities); climate change policy and justice; and the intersection of climate change with concerns about biodiversity conservation, food security, migration, and local development. Learning from this broad range of material gives students the complex perspective they need to grapple with the climate crisis. In 229P, students will complement this work with hands-on engagement at the level of Federal policy and legislation.

How do we change our politics, save democracy, and move beyond the "us vs. them" culture that divides us? This course begins with the premise that how we talk to one another and debate controversial issues can promote the public good or erode it in irreparable ways. Students in each class session will put principles of public dialogue into practice as they learn deliberative theories and skills that can help save democracy. Class readings will turn to historical case studies to frame the most controversial political issues we face today.

HNUH238X **Learning as Deliberation: The Struggle for the Future of Higher Education**

Credits: 3	Grading Method: Regular, Pass-Fail	General Education: DSHU, DVUP

It has been nearly a millennium since European university students first gathered in halls to listen to lectures. With some technological additions (lights, whiteboards, Powerpoints), introductory courses at U.S. universities look pretty much the same. For the past few decades, financial consultants, educators, and students have questioned whether this model of learning makes sense in the 21st century. In 2020, a pandemic gave this question a new urgency. Nothing about the old way of doing things seems inevitable anymore; everything seems up for debate. Should we get rid of lecture halls? What about dorms? The SATs? Tuition? This seminar invites students to deliberate about the current policies and politics of public higher education in the United States. We will study how ancient ideas about merit, democracy, and equity (or lack thereof) have shaped decisions about what higher education should offer and to whom. We will look to alternative traditions of learning with roots in indigenous worldviews, abolitionist organizing, and feminist collaboration, and study how these traditions have challenged and complemented public higher education. As we explore theories and practices of the past and present, students will learn to articulate and advocate for their own priorities as 21st-century citizens of UMD.

HNUH238Y **Information Weaponization: Thinking Critically in a Changing World**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS

Contemporary challenges--such as climate change, food, energy and water security, and deadly virus transmission--demand that people think critically. These challenges are often complex and interrelated; for example, society's increasing demand for energy contributes to human-induced climate change, which in turn, limits freshwater and food supplies, and which in turn, could contribute to the worldwide spread of disease. While many societal challenges are seriously impacting local, regional and global communities, an increasing availability of information has contributed to what many call a "Post-Truth Era," where emotions and personal beliefs override scientifically valid evidence and explanations. We will consider the institutional use of post-truth a form of information weaponization. This course asks how information weaponization impacts the evaluation of valid lines of evidence and explanations. How do we evaluate and what is needed to improve individuals' evaluations of claims in the post-truth era? Combatting mythological and unproductive thinking in the face of current change requires increased digital literacy. We will learn enhanced reasoning, evaluation skills, and critical thinking.

HNUH248X **My Hometown, Our Wilderness: Ecology of Identity**

Credits: 3	Grading Method: Regular, Pass-Fail	General Education: DSHU, DVUP

What has been the setting of your life? Suburbs? Cities? A farm? We may be used to thinking of environments as equal access across society, since everyone is free to visit our National Parks or spend a day at the beach. But there are striking ways in which identity affects our habitat. Race, class, gender, sexual preference, and other markers have strong influences on where we spend our time, what we eat, and how we work and relax. Suburbs, cities, wilds, and farms are not just physical places, they exhibit histories of social inclusion and exclusion. For example, the money and free time of affluent Americans serves as a portal to leisure spaces that would be inaccessible to working-class Americans who lack the ability to take time off, drive or fly long distances, and pay for it all. We'll profile identity ecology through the poetry of African American urban naturalists, essays of wilderness-loving men like Edward Abbey, the comedy of white environmental outrage, and the racialized class tensions in resorts like Aspen, CO. This survey will support your in-depth personal exploration of identity ecology in a collaborative video media project.

HNUH248Y **How Do You "Man Up?": Men, Masculinity, and Mental Health**

Credits: 3 | Grading Method: Regular, Pass-Fail | General Education: DSHS, DVUP

In August 2018, the American Psychological Association released guidelines regarding the best practices for researchers and mental health professionals when working with boys and men. Many reacted with the question, "are we treating masculinity as a mental health issue?" This course aims to answer that question by taking a historical perspective on how American society has viewed masculinity from the beginning of psychology as a field of study until present day. An intersectional approach will be taken to better understand how race, ethnicity, sexual orientation, gender identity, and socioeconomic status impact men and masculinity. We will address the questions: How does one prove their manhood? How much of masculinity is biological versus socialized? What experiences are unique to men? And how do psychologists and mental health professionals understand and address mental health concerns among men?

In this course you will learn the skill of birdwatching (or "birding") and will contribute your observations to a world database of sightings that help establish trends in overall bird populations. Birding (and bird feeding) is one of the most popular pastimes in the United States, with tens of billions of dollars spent annually by enthusiasts. Birds also tell us about the health of our natural environment: by noting where birds are, and where they are absent, scientists can learn about harmful changes to our world ecosystem and how to reverse them. We can help out by becoming responsible citizen scientists. This course will feature regular field trips to observe birds in their natural habitats. No prior birding experience is needed.

Visual analytics is the use of interactive visual interfaces to facilitate analytical reasoning. In essence, visual analytics is based on the--not uncontroversial--idea that humans and computers working alone are insufficient for the data challenges of today and tomorrow, and that effective synthesis of both humans and computational algorithms are needed to create human-in-the-loop systems. Thus, visual analytics bridges human-centered disciplines such as visualization and human-computer interaction with computation-centered disciplines such as machine learning, probabilistic methods, and knowledge discovery. The course contents will include both theoretical foundations of this interdisciplinary science as well as practical applications of integrated visual analysis techniques on real-world problems.

Provides students with a unique exploration of texts and films created by various Jewish authors and filmmakers, and the way they dealt with questions of gender and sexuality. The texts and films touch on the central social, economic, and cultural issues of European, American, and Israeli Jewry during the middle ages, and up to the 19th, 20th and 21st centuries. It will explore how the categories of gender and sexuality changed and were represented in rich and contrasting ways according to the authors' social norms and ideological convictions. Focusing on sexuality and gender in Jewish culture can help us better understand Jewish social norms, creativity, and history, in particular modern Jewish literatures, visual medias, and the Jewish encounter with modernity as a whole. We will be reading prominent writers and filmmakers such as Sholem Aleichem, Philip Roth, S. Y., Jill Soloway, Abramovitsch, Todd Solondz, Celia Dropkin, I. B. Singer, Sholem Ash, Boaz Davidson, Judd Apatow, Tseruyah Shalev, and others. This is a discussion-based course; however, it also emphasizes developing the skills of analytical and abstract thinking and critical writing about texts and other cultural productions. This course does not require proficiency of any foreign language or any specific historical knowledge.

Thus, the primary purpose of this course is to facilitate an in-depth, understanding of the muscles of the body. Specifically, students will learn the origins, insertions, primary and secondary functions, as well as nervous innervations of the major muscle groups of the body. In addition, students will develop palpation skills and learn to grade the function of each muscle through manual muscle testing techniques. These skills form the foundation for assessing functional movement as well as performing safe and effective manual therapy techniques. Thus, while the focus of the class will be to develop sound, introductory palpation and manual muscle testing skills, basic principles of functional movement and manual therapy will also be addressed through hands-on application as well as case study.

Ties between the United States and the Korean Peninsula are contentious, complex, and often confusing. The Korean peninsula is home to one of the United States closest allies, the Republic of Korea (ROK), and one of its more bombastic antagonists, the Democratic Peoples Republic of Korea (DPRK). While the history of US relations with the Korean peninsula are still shaped by the ongoing Korean War, the relationship is much older and the major players in the relationship are more diverse than soldiers and generals. This course will survey the issues and questions that have shaped and continue to shape Korean views of the United States and vice-versa from the 19th century up to the present day.

NFSC220 **Diet: Is it a cause or a solution**

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSSP, SCIS

If diet is a very straightforward topic; then why and how does this simple matter result in complicated health problems? Diet can provide a simple solution to numerous health issues. So, why do many people fail to follow this seemingly simple solution and still suffer from obesity and other diet-related diseases? Diet is a topic that most people know but few people understand. In addition, diet has become one of the most important lenses for looking at a variety of social, economic, and cultural issues. Since the concept of diet is continuum and has multifaceted aspects, we need to understand it in broad and multidisciplinary perspectives including social, cultural and economic aspects.

The Philosophy, Politics, and Economics (PPE) ecosystem is vast and complex and consists of public, private, and nonprofit sectors engaged in shaping the world around them. Each sector within this ecosystem has its own theory of change and plays a specific role in the broader impact space. As you seek to become a PPE professional, it is essential to develop a deeper understanding of this ecosystem, the different levers of influence within it, and the intra-relationship between the sectors. PHPE401 **Social Philosophy and Political Economy**

Credits: 3

Grading Method: Regular, Pass-Fail, Audit

Examines capitalism and socialism as differing modes of economic production through several different theoretical lenses. We begin by examining capitalism and socialism as they developed historically, by looking primarily at the work of Adam Smith and Karl Marx. Then, we turn our attention to one of the most important debates in 20th century economics: to what extent rational economic calculation is possible in a socialist commonwealth. After this we turn our attention to how capitalist and socialist modes of production functioned in practice. We end by turning our attention to the ethics of capitalism and socialism: which mode of economic production is most just?

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHS

A survey course, focusing on public policy institutions and analytical issues as well as on overview of key public policy problems. Students will be introduced to public policy as a discipline, with a brief overview of the actors and institutions involved in the process, and familiarize themselves with the kinds of problems typically requiring public action. The course will examine these problems from a multijurisdictional and multisectoral perspective. Specific policy areas examined include education policy, health policy, economic and budgetary policy, criminal justice policy, environmental policy, and national and homeland security policy. The course should permit students to have broad foundational exposure to the field that will give them a solid base for more advanced courses.

PLCY101 **Great Thinkers on Public Policy**

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHS, SCIS

Great ideas in public policy, such as equality, efficiency, sovereignty, liberty, bureaucracy, democracy and security are explored through the lens of great thinkers. An introduction to the intellectual foundations of public policy, from ancient theories on collective public action through the more contemporary development of public policy as a discipline. This may start as early as the ancient Greek philosophers and their views on public action through contemporary classics of public policy. At the conclusion of the course, students will have read classic works in the field and will master the key themes that have dominated the intellectual debates about public policy over its history. Emphasis will be on the interdisciplinary foundations of public policy, through examining core disciplinary contributions from economics, political science, management, philosophy, and other relevant disciplines.

The Sustainable Development Goals (SDGs) stand as a blueprint to achieve a better and more sustainable future for all. Adopted by every member of the United Nations, the SDGs touch on all aspects of society, from poverty to equality to the environment. Is it realistic to create a blueprint for the world's future? Are the SDGs actually achievable? Is this global framework relevant to the issues facing local communities? Students in this course will tackle these questions, learning from the founders of the SDGs and leading experts working to implement the goals around the world. Students will also work collaboratively using design thinking principles to apply this global blueprint to local issues.

PLCY388X **Special Topics in Public Policy; Cyber Conflict: Broad Scope and Disparate Impacts**

Credits: 3

Grading Method: Regular, Pass-Fail, Audit

Advanced special topics focusing on an interdisciplinary topic related to Public Policy.

Cyber conflict is often considered a distant problem the concern of mi litary commands and national governments. Cyber operations and intelligence remain at the center of conflict patterns, but there is so much more. The focus on state-on-state conflict is belied by the fact that the tools and targets of cyber conflict are frequently mundane and include information and services used daily by the public. And if tools can be used by everyone, attribution of effects can be to anyone. Harm can be unevenly distributed, and often falls on those least equipped to deal with its short term and long-term effects. Algorithmic decision making raises the issue of disparate impact hidden in non-transparent supposedly unbiased settings. This seminar explores these issues connecting old concept s of security with new concerns with disparate impact, privacy, access, and disinformation.

Credits: 3	Grading Method: Regular, Pass-Fail, Audit	General Education: DSHS, SCIS

Credit only granted for: PSYC234 or PSYC289D. Formerly: PSYC289D.

What are the secrets to living a happy life? Can happiness be found within the context of war, a depressed economy, violence and other major stressors? Are some people born happier than others? This course will teach you the scientific process that psychologists use to study happiness (and related emotional variables) and give you the opportunity to practice applying that process in a number of ways. You will learn how we (a) gather and critically evaluate research findings in the existing literature, (b) integrate those findings into coherent and testable theories, (c) design and conduct valid scientific research that tests those theories and extends our knowledge, and (d) effectively communicate our theories and findings to a wide range of audiences. The result of the process is a more accurate and objective understanding of happiness, and that is what prepares you to apply your scientific understanding to explain and influence a wide range of outcomes.

Common constructs shared by a variety of procedural programming languages will be emphasized. Basic statistics and probability theory will be reviewed from a computational perspective, and more advanced topics introduced. During the course, students will simulate toy data sets which they will then analyze knowing how the data came about, as well as work with real data. The class is highly hands-on with a large number of in-class lab and homework projects. Expect to work a lot and move quickly. Because of the hands-on nature of the class, the overall focus is more on application and execution rather than theory. However, some theory is covered at a high level so that students are aware of why they are doing something, rather than mindlessly writing code.

For 800 years, medieval Spain was home to one of the most religiously diverse societies in European history. Despite frequent hostilities, the interactions of Spanish Jews, Christians, and Muslims produced a flowering of science, theology, and literature in an often remarkably tolerant climate. Students will learn how medieval Spanish people themselves experienced interreligious contact and conflict. They will also discover the modern pressures, prejudices, and ideals that have shaped historians interpretations of medieval Spain.

RUSS289I **The Power of the Word: Freedom of Speech in the U.S. and Russia**

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | CORE: HO | General Education: DSHU, SCIS

The central theme of Russian 287 is the abiding human propensity to ask questions, to use language to pursue inquiry. To be a "critical thinker," one must develop the habit and discipline of asking questions and challenging assumptions. Through a comparative approach to the US and Russian experiences, we will explore the role of language and its power in different political and social systems. We will explore such questions as: Why is free speech so fiercely defended in a democracy and such a threat to totalitarianism? What is the relationship between free speech, political power and dissent? Is the pen still mightier than the sword, even in the nuclear age? What has shaped our current attitudes toward freedom of expression? How has the concept of political free speech been extended to include freedom of expression in general, such as in the creative arts? What role do new technologies play in the arena of free speech debates? We will explore how freedom of speech and expression has been defended or its suppression justified in the US and Russia. We will practice the art of questioning and constructing counter-arguments throughout the course.

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHU, SCIS

Additional information: Taught in English.

Confucius, Mencius, Zhuangzi and other Chinese thinkers who lived more than 2,000 years ago would argue that the contemporary Western emphasis on self-discovery (Find yourself) and self-acceptance has led you astray. See what they have to say and discuss what relevance it has for the modern world as we study how early Chinese thinkers wrestled with questions of existence, morality, and governance. No previous knowledge of Chinese philosophy and history will be assumed and no prerequisites are required. We will discuss ideas that are both historical and relevant to students' lives. What is "the Way"? How do we cultivate spontaneity? Is there a stable self? How can we be more alive? These are questions important for ancient kings but also for UMD students choosing a major, or wondering how ARHU can benefit them.

SPAN798L **Open Seminar; All About Rhetoric - Or What?**

Credits: 3

Grading Method: Regular, Audit, Sat-Fail

The classical liberal arts were the quadrivium's four subjects (which morphed into today's sciences, plus musicology) resting on the examination of grammar, logic, and rhetoric. All those disciplines have clearly evolved, with the arguable exception of rhetoric, which is often even frowned upon as the most "trivial" among the trivium's offerings. This course examines the subject through the language sciences, delving into the field's foundations. It is argued that, at the relevant level of abstraction, effective rhetoric is, in fact, routinely used by the best communicators and has found its unconscious niche in public discourse. But how will it fare in a hypertextual world?

In this seminar we will connect the late Castilian Middle Ages and Early modern periods Spain with 16th Florida and the US East Coast through literary texts, chronicles, private letters, maps and other documents that can help us address this ignored commonality or missing link.

"What is a Nation?" was a question Ernest Renan asked to read his present and shape the past. It is also a question that has been central to 19th century cultural studies. But really, what is a nation? and who are the "patriots"? This seminar will concentrate on the process of nation formation in Nineteenth-Century Latin America. We will explore the strategies and practices used to construct the nation as a homogenous Patria while examining the emergence of political subjects. Foundational texts from Argentina, Colombia, Cuba, Chile, Mexico, and Per will be read along these lines.

SURV622 **Fundamentals of Data Collection II**

(Perm req)

Credits: 3

Grading Method: Regular, Audit

Prerequisite: Permission of Instructor required; or fundamentals of Data Collection I.

This is the second course in a two-semester sequence that provides a broad overview of the processes that generate data for use in social science research. Students will gain an understanding of different types of data and how they are created, as well as their relative strengths and weaknesses. A key distinction is drawn between data that are designed, primarily survey data, and those that are found, such as administrative records, remnants of online transactions, and social media content. The course combines lectures, supplemented with assigned readings, and practical exercises. The second semester builds on the discussion of survey mode during the first semester, considering the role played by interviewers in telephone and in-person surveys and their effects on the data collected. Students next are introduced to the methods for extracting and re purposing found data for social science research. Methods for the classification of text, with an emphasis on automated coding methods, are introduced and selected applications considered (e.g., coding of open-ended survey responses, classification of the sentiments expressed in social media posts). Issues in using survey data and administrative records to measure change over time (longitudinal comparisons) are explored. The term concludes with an examination of methods for evaluating the quality of both designed and found data.

It runs concurrently with the University of Michigan course.

SURV706 **General Linear Models**

(Perm req)

Credits: 2 Grading Method: Regular, Audit

Recommended: Sound understanding of Linear Regression Models, Calculus and Linear Algebra. Restriction: Must have permission of BSOS-Joint Program in Survey Methodology. Credit only granted for: SURV706 or SURV699J. Formerly: SURV699J.

The main focus of this course lies on the introduction to statistical models and estimators beyond linear regression useful to social and economic scientists. It provides an overview of generalized linear models (GLM) that encompass non-normal response distributions to model functions of the mean. GLMs thus relate the expected mean E(Y) of the dependent variable to the predictor variables via a specific link function. This link function permits the expected mean to be non-linearly related to the predictor variables. Examples for GLMs are the logistic regression, regressions for ordinal data, or regression models for count data. GLMs are generally estimated by use of maximum likelihood estimation. The course thus not only introduces GLMs but starts with an introduction to the principle of maximum likelihood estimation.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

This course will provide a detailed introduction to multiple imputation, a convenient strategy for dealing with (item) nonresponse in surveys. We will motivate the concept and illustrate why multiple imputation should generally be preferred over single imputation methods. The main focus of the course will be on strategies to generate (multiple) imputations and how to deal with common problems when applying the methods for large scale surveys. We will also discuss various options for assessing the quality of the imputations. All concepts will be demonstrated using software illustrations in R.

Some limitations of these approaches will also be discussed. The second part of the course will introduce synthetic data as a possible alternative. This part of the course will discuss different approaches to generating synthetic datasets in detail. Possible modeling strategies and analytical validity evaluations will be assessed and potential measures to quantify the remaining risk of disclosure will be presented.
